Correction to: Maternal personality disorder symptoms in primary health care: associations with mother–toddler interactions at one-year follow-up

Magnhild Singstad Høivik^{1,3*}, Stian Lydersen², Ingunn Ranøyen² and Turid Suzanne Berg-Nielsen⁴

Correction to: *BMC Psychiatry* (2018) 18:198

DOI: 10.1186/s12888-018-1789-5

Following publication of the original article [1], the authors notified us of an error in the data presented in Table 2: the DIP-Q subscales show an incorrect scale.

The corrected Table 2 is presented below.

Author details

¹Department of Mental Health, Faculty of Medicine and Health Sciences, the Norwegian University of Science and Technology (NTNU), N-7491 Trondheim, Norway. ²Regional Centre for Child and Youth Mental Health and Child Welfare – Central Norway, Faculty of Medicine and Health Sciences, The Norwegian University of Science and Technology (NTNU), Trondheim, Norway. ³Division of Psychiatry, St Olavs Hospital, Trondheim University Hospital, Trondheim, Norway. ⁴The Centre for Child and Adolescent Mental Health, Eastern and Southern Norway, Oslo, Norway.

Maternal personality disorder symptoms measured with the DIP-Q (DSM IV and ICD-10 Personality Questionnaire)

* = $p < 0.05$, ** = $p < 0.01$, *** = $p < 0.001$ (independent samples t-tests of characteristics in attrition compared to remaining groups in baseline sample, and paired sample t-tests comparing characteristics of remaining and follow up groups)
